The Lifebox, the Seashell and the Soul

**What Gnarly Computation
Taught Me About
Ultimate Reality,
The Meaning of Life, and
How to be Happy**

(Thunder's Mouth Press, 2005)

My Book Title is a Dialectic Triad

The *Thesis*, the *Synthesis*, and the *Antithesis*

~

The *Lifebox*, the *Seashell*, and the *Soul*

Dialectic Triad

THESIS: “Universal Automatism”

The world is made of computations.

- ❑ A *computation* is a process that obeys finitely describable rules.
- ❑ The world consists of *many* computations at high and low levels. There need not be a single underlying master computation.
- ❑ The *human mind* is made of computations: percepts, emotions, intentions, plans, consciousness as a self-symbol in a feedback loop. The “**lifebox**” simulation.

The “Stairway to Heaven” Pattern for Viewing Everything As a Computation

ANTITHESIS: Life Doesn't *Feel* Like a Computation

- The feeling of being alive. “I am.”
- Consciousness as merging with the world.
- Dreams.
- Visions of God.
- The **soul**.
- And what about quantum mechanics?

SYNTHESIS:

Gnarly Computations Are Lifelike.

Example: Free Will

- Suppose a gnarly AI lifebox simulates a person.
- Gnarly computations are *deterministic*.
- But gnarly computations are *unpredictable*.
- The AI can think it has free will.

Why “Seashell”?

Cone Shells Show Naturally Occurring Gnarly Computations.

Science Needs

A Taxonomy of Computations

- What kinds of **computations** exist?
- If everything is a computation, this study gives insight into what kinds of **phenomena** can exist.
- This is experimental computer science in an **observational** sense. Stephen Wolfram led the way with his A New Kind of Science.

- **Simple (Too Cold):** Dies Out or Repeats. Wolfram classes 1 and 2.
- **Gnarly (Just Right):** Complex moving patterns. Natural processes. Wolfram class 4.
- **Looks Random (Too Hot):** “Seething Dog Barf” --- Bill Gosper. Wolfram class 3.

CA Rule 30 is Pseudorandom (Too Hot, Seethes, Class 3)

							
---	---	---	---	--	---	---	---

Rule 30 Seethes

Rule 110 Has Gliders

(Gnarly, Class 4)

							
---	---	---	---	--	---	---	---

Gnarly Rule 110 Is Provably Computation Universal!

Gnarly 2D CAs: CAPOW Zhabotinsky Scrolls

CAPOW: Continuous Valued CAs

Theoretical Consequences

- (Wolfram's Principle of Computational Equivalence).
Most naturally occurring processes are universal computations. **Nature is rich.**
- (Principle of Unpredictability)
Most natural processes are unpredictable, that is,
They can't be emulated faster than they occur.
- (Godel's Incompleteness Theorem for Nature)
Given any scientific theory of the world T,
And given any complex natural process P,
There are statements about process P
which theory T is unable to prove or disprove.

Takeaway for Designers

- Nature uses **unpredictable, gnarly computations**, they “look right.”
- **Stable patterns emerge** in all sorts of computations, and you needn’t worry why.
- If a complicated algorithm can achieve a given effect, a **very simple algorithm** can do it too. Focus on appearance, not hidden reasoning.
- Lots of **exploration** still to do. Mechanized searches of computation space are fruitful.

How to Be Happy

- ▶ *CS.* **Turn off the machine.**

Nature computes better than a beige, buzzing box.

- ▶ *Physics.* **See the gnarl.**

The world is full of rich, chaotic computation.

- ▶ *Biology.* **Feel your body.**

Your body is the most complex device you'll ever operate.

- ▶ *Psychology.* **Release your thoughts.**

Avoid repetition. Don't overvalue logic. Accept change.

- ▶ *Sociology.* **Open your heart.**

Others are complex universal computations like you.

- ▶ *Philosophy.* **Be amazed.**

The universe is a miracle, forever transcending science.
